

Habitats

A Habitat is a place where an animal or a plant can find all the necessary conditions that they need to survive and reproduce.

What are the 5 main things that all animals need in their habitats?

In the list below draw circles round the main 5 needs. It may be a good idea to discuss these with your group or class before you do this.

Flowers	A mate	Food	Habitat
Nesting material	A good view	Fresh water	A TV
Wind	Shelter and safety		

The following habitats are to be found in the Fairfield Nature Reserve.

Hedgerow	Woodland	Wet Meadow
----------	----------	------------

Which animals and birds are often found in each of these habitats? Look at the list of animals and birds below and then write their names under the correct habitat. Some animals and birds may be found in more than one habitat.

blackbird	hedgehog	woodpecker	chaffinch
woodlouse	rabbit	crow	Bee
heron	tawny owl	dragonfly	
mallard	spider	frog
